

HYDROTENSYL COMPLEX

Multi-functional complex for skin care

INCI NAME:

Water, Honey extract, Soluble collagen, Hydrolyzed elastin, Sodium PCA, Serine, Glycogen

DOSE OF USE:

FROM 3 TO 5%

SOLUBILITY:

HYDROSOLUBLE

PRESERVATIVE:

PARABEN FREE

COSMETIC USE:

- Beauty preparations for face and neck like anti-aging, nutritive or moisturization formulations
- Specific treatments for dry and sensitive skins,
- Sun care preparations
- After shave products
- Products for rough skins
- Preparations for skins lacking elasticity
- Make-up Treatment
- Body gels or lotions

DESCRIPTION:

HYDROTENSYL COMPLEX is an active ingredient made from the combination of 3 powerful actives with extraordinary benefits for the skin:

- Ecological Honey Extract
- Marine native Collagen
- Marine Hydrolyzed Elastin

Native Collagen has a high molecular weight, it cannot penetrate the skin by itself. But it leaves a protective film on the skin with tensor effects and remarkable moisturizing capabilities.

With Hydrolyzed Marine Elastin, we can provide to the skin, nutrients and amino-acids which will be used by the fibroblasts for the production of new fibers of elastin and collagen. It contains the peptides and amino acids of elastin, among them: Aspartic Acid, Theorine, Serine, Glutamic Acid, Proline, Glycine, Lysine, and Arginine.

With Honey Extract, the skin cells get analogue substances as the one founded at the NMF. Also provide the skin with components with an important capacity of hydro-retention and hydro-regulation at the corneocytes level.

It is a complete active ingredient from which the skin will get substances to nourish, increase its moisture, get external protection against damaging substances, and decrease its wrinkles. The most complete ANTI-AGE active ingredient from marine and botanical origin

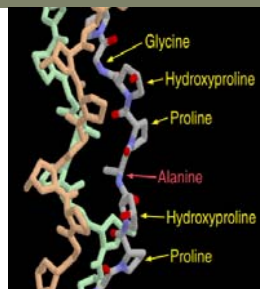

PROPERTIES:

HYDROTENSYL COMPLEX is indicated for skin preparations, for both face and body.

Has a tensor effect thanks to the native collagen film forming capability. It can sooth the skin lines giving a sensation of softness. It will also improve the protection of the skin against environmental damages. Thanks to its hygroscopic feature, it has an important moisturization capacity. It offers to the skin amino acids and peptides to help increase its elastin synthesis, which decreases with age or with the premature aging of the skin. The increase of the moisturization of the skin induces to an improvement of its elasticity and softness.

Skin care use:

- ✓ Helps restoring the dermis collagen and elastin, by providing to the fibroblast with amino-acids they can metabolize.
- ✓ Reinforces the hydro-lipidic barrier, maintaining the cutaneous moisture and tonus.
- ✓ Filmogenic effect, helping dry and mature skins to defend themselves from the environmental damages, specially the UV exposition.
- ✓ Natural moisturizer. Reproduces the skin's NMF
- ✓ Hydro-retention and hydro-regulation
- ✓ Restrains the dehydration without occlusive effect
- ✓ Improves the flexibility and softness of the skin
