

BIO-HYDRACTYL

Honey + Glycogen: moisturization + energy

INCI NAME:

Water, Mel Extract, Sodium PCA, Serine, Glycogen

DOSE OF USE:

FROM 3 TO 10%

SOLUBILITY:

HYDRO-SOLUBLE

PRESERVATIVE:

PARABEN FREE

COSMETIC USE:

- ✓ Products for dry, rough, aged skins & prematurely aging.
- ✓ Preparations for skins lacking elasticity
- ✓ Treatment make-up
- ✓ Body gels or lotions
- ✓ After-sun products
- ✓ Reinforcing the water-absorbing capacity of the stratum corneum
- ✓ Diminishing skin roughness, while improving suppleness cellular cohesion, velvetiness, comfort and brightness.

DESCRIPTION:

BIO-HYDRACTYL is a natural hydro-glycolic active with a composition similar in elements and in functionality to the skin's Natural Moisturizing Factor (NMF)

The NMF is a compound of substances responsible of bounding the water at the superficial layers of the skin. It is thus, the responsible of the skin's hydration.

BIO-HYDRACTYL is an active ingredient designated to improve the hydro-regulation of the superficial layers of the skin, while supplying energy reserves to the epidermal cells.

Its main components are:

- PCA (Sodium Pirrolidon Carboxilate), Main component of the NMF.
- Amino acids: Similar to the ones found at the NMF
- Polysaccharides: Important hydro-regulation and hydro-retention powers.
- Lactic Acid and Urea
- GLYCOGEN: Energy and anti-stress supply

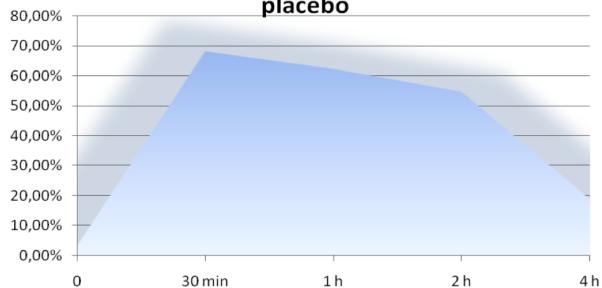

BIO-HYDRACTYL can provide the skin cells with analogue substances as the one founded at the NMF. We also provide the skin with components with an important capacity of hydro-retention and hydro-regulation at the corneocytes level.

PROPERTIES:

BIO-HYDRACTYL provides the following properties to the skin:

- ✓ Natural moisturizer. Reproduces the skin's NMF
- ✓ Hydro-retention and hydro-regulation
- ✓ Restrains the dehydration without occlusive effect
- ✓ Improves the flexibility and softness of the skin
- ✓ Reinforce of the epidermal defense and repair capacities by increasing cells' energy reserves

Moisture increase Bio-Hydractyl 3% versus placebo
